Art Unit: 1644

DETAILED ACTION

- 1. The examiner of this application in the PTO has changed. To aid in correlating any papers for this application, all further correspondence regarding this application should be directed to ILIA OUSPENSKI, Group Art Unit 1644, Technology Center 1600.
 - 2. Applicant's amendment and remarks filed on 07/08/2009 are acknowledged.

Claims 1 – 61 have been canceled.

Claims 62 – 66 have been added.

Claims 62 – 66 are pending.

3. This application contains sequence disclosures that are encompassed by the definitions for nucleotide and/or amino acid sequences set forth in 37 CFR 1.821(a)(1) and (a)(2). However, this application fails to comply with the requirements of 37 CFR 1.821 through 1.825, because the sequences recited at least in claim 66 are not accompanied by SEQ ID Numbers. Applicant is reminded of the sequence rules which require a submission for all sequences of more than 9 nucleotides or 3 amino acids (see 37 CFR 1.821-1.825) and is also requested to carefully review the submitted specification for any and all sequences which require compliance with the rules. Applicant is reminded to amend the specification and the claims accordingly.

Applicant must comply with the requirements of the sequence rules (37 CFR 1.821 - 1.825) in response to this Office Action.

Application/Control Number: 10/585,491 Page 3

Art Unit: 1644

3. Applicant's election with traverse of the Species of PD-1 in the reply filed on 08/07/2009 is acknowledged.

The traversal is on the grounds that allegedly the articulated rationale for requiring an election of species is insufficient for a finding that the presently claimed invention lacks unity.

In response, the cited prior art document of Hunig et al. (US-2003/0166860) teaches superagonistic antibodies to CD28, CTLA4, ICOS and PD-1 (see entire document, in particular e.g. claim 8 in conjunction with claim 3). Therefore, the Species as set forth in the previous Office Action are deemed to have no special technical feature that defines the contribution over the prior art of Hunig et al. Since the Species of Applicant's invention do not contribute a special technical feature when viewed over the prior art, they do not have a single general inventive concept and so lack unity of invention under PCT Rule 13.2.

4. Applicant's amendment has necessitated an additional requirement for election of sub-species, as set forth herein.

Sub-species Election

5. This application contains claims directed to more than one sub-species of the generic invention. These sub-species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

Page 4

Applicant is required to elect a sub-species of a specific epitope from those recited in claim 66.

These sub-species do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the same reason as set forth in section 3 supra.

Applicant is required under 35 U.S.C. § 121 to elect a single disclosed subspecies for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

6. Applicant is advised that a response to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 C.F.R. § 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. M.P.E.P. § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. § 103 of the other invention.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to ILIA OUSPENSKI whose telephone number is (571)272-2920. The examiner can normally be reached on Monday-Friday 9 - 5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ram R. Shukla can be reached on 571-272-0735. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
